

## Redmine - Patch #17239

### ActionMailer cannot send email via SSL SMTP

2014-06-20 10:15 - hongbo yang

<b>Target version:</b>	

**Description**

I'm setting up a Redmine with Bitnami Stack. All works but sending email not.

Environment:

Redmine version 2.5.1.stable  
Ruby version 1.9.3-p545 (2014-02-24) [x86\_64-linux]  
Rails version 3.2.17  
Environment production  
Database adapter Mysql2

SCM:

Subversion 1.8.8  
Git 1.9.0  
Filesystem

Redmine plugins:  
no plugin installed

I googled through web, I find the solution:  
<http://www.redmine.org/boards/2/topics/13625?r=15681> referenced:  
[https://rails.lighthouseapp.com/projects/8994/tickets/1731-make-enable\\_starttls\\_auto-opt-in-in-actionmailer#ticket-1731-18](https://rails.lighthouseapp.com/projects/8994/tickets/1731-make-enable_starttls_auto-opt-in-in-actionmailer#ticket-1731-18)

the action mailer cannot handle ssl smtp server correctly. the referenced url gives a bug fix for redmine (or for rails)

the action mailer cannot handle ssl smtp server correctly. the referenced url gives a bug fix for redmine (or for rails)

I tried that smtp settings does have a ssl option

so currently we do not need the mailer\_ext.rb patch file to work with SSL smtp server. but the ssl option is not mentioned in current doc

default:

```
# Outgoing emails configuration (see examples above)
```

```
email_delivery:
```

```
  delivery_method: :smtp
```

```
smtp_settings:
```

```
  address: smtp.domain.com
```

```
  port: 465
```

```
  ssl: true
```

```
  enable_starttls_auto: true
```

```
  domain: domain.com
```

```
  authentication: :login
```

```
  user_name: redmine@domain.com
```

```
  password: xxxx
```
