Description	
<p>The issue popup menu is great for many things, but these options I find myself lacking. Below or above the current Watch/Copy/Delete items. For example:</p> <ul style="list-style-type: none">- Accept/Begin/Start Work, visible if the issue is in status New. Set status to In Progress. Assign it to the current user. Probably allow for a comment to be added.- Resolve, visible if the issue is in status In Progress. Set status to Resolved. Probably allow for a comment to be added. <p>... and probably others.</p> <p>Perhaps they could be possible to enable/disable by configuration, or even better be completely customizable (name, set status, assign, comment etc).</p> <p>I hope I'm making myself understood without mockups.</p>
