

Redmine - Patch #1764

Add session_config option-stubs to environment-config

2008-08-11 03:56 - Mischa The Evil

Status:	New	Start date:	2008-08-11

Target version:			
Description			
<p>This is a multi-branch (trunk and stable-0.7.3) patch which simply adds two session-related configuration-directive stubs to <code>./config/environment.rb</code>.</p> <p>The given stubs are for:</p> <ul style="list-style-type: none">• session_key• session_path <p>I created (and provide) this patch due to the fact that one of both directives is required to run multiple Redmine (or other apps which use the same session-names as Redmine) deployments on the same domain (though seperate installs under several different sub-URI's) without suffering from <i>session-mangling</i>.</p> <p>Both directives aren't documented (sufficiently) imho at the Redmine website or the Redmine Code-base. That is the reason why I'd propose to add something like provided with this patch. If it is not taken into the project I would propose to add an entry to the Redmine FAQ about these issues. I am volunteering already... :-)</p> <p>I already found some related issues and threads:</p> <ul style="list-style-type: none">• #540• #1041• http://www.redmine.org/boards/2/topics/show/150#message-163 <p>Both issues contain comments which faulty "documents" the session_key directive. This faultyness is due to the fact that rake will crash if the session_key directive is used in <code>./config/enviroment.rb</code> as commented in both issues probably caused by the rake-scripts which aren't accepting Rails 2.1 syntaxis.</p> <p>The mentioned forum-thread gives to correct syntaxis though it is mixed with another config-directive in some another case.</p> <p>Beware: This patch only adds config-stubs which solves the session-mangling behaviour in the given environment. It does not fix any related problems with the so-called autologin-cookie. I created a sepereate specific issue for that (#1763).</p> <p>See also #540 and partly #982 regarding the problems with the autologin-cookie.</p>			

History

#1 - 2008-08-11 04:03 - Mischa The Evil

The main error rake "gives" when it crashes due to the syntax-errors in the issues [#540](#) & [#1041](#) is:

uninitialized constant ActionController

#2 - 2009-11-23 02:34 - Mischa The Evil

- Category set to Accounts / authentication
