Category:	UI	Estimated time:	0.00 hour
Target version:			
Resolution:			
<div>Description</div> <p>This functionality should provide the manager of a project to make a stored and often used custom query for tickets/issues available as a Tab (Module) on project level (selectable when storing the query: <i>show as tab</i>).</p> <p>Benefits:</p> <ul style="list-style-type: none">• often used queries are available via single click• as custom tracker are (slightly mis-)used for other purposes as <i>meetings, notes, general responsibility</i> this help structuring a project and increase navigation.• furthermore it would support using redmine ticket system in a very generic usage.

We access our redmine 99% of the time through browser bookmarks that point to custom queries, and after navigating inside Redmine we often use the same bookmarks to "start again" from some bird-view.
I could definitely see value in flagging custom queries to be always visible as tabs in a project.
