

Redmine - Defect #18068

Copying Projects & Parent Child Issues

2014-10-10 23:59 - James H

Status: Closed	Start date:
Priority: Normal	Due date:
Assignee:	% Done: 0%
Category: Issues	Estimated time: 0.00 hour
Target version:	Affected version: 2.4.3
Resolution:	

Description

Issues that have parent child relationships only show up as nested in a tree view in the issues list when the issues are in order (parent first then children immediately below it).

When copying projects...

- If I have the issues in order to show up in a nested view, the parent issue still gets copied first before its children and shows up incorrect.
- If I put the issues in opposite order, it still behaves similarly.
- I have no way to have a nested view of issues after copying a project.

i.e.

Project Issues to be copied:

- Child Issue 1.1
- Child Issue 1.2
- Child Issue 1.3

Parent Issue 1

Parent Issue 2

- Child Issue 2.1
- Child Issue 2.2

Parent Issue 3

- Child Issue 2.1
- Child Issue 2.2

becomes:

- Child Issue 1.1
- Child Issue 1.2
- Child Issue 1.3

Parent Issue 1

- Child Issue 2.1
- Child Issue 2.2

Parent Issue 2

- Child Issue 2.1
- Child Issue 2.2

Parent Issue 3

History

#1 - 2014-11-08 11:44 - Toshi MARUYAMA

- Related to Feature #7907: Display Issues in a hierarchy (tree) added

#2 - 2014-11-08 11:53 - Toshi MARUYAMA

- Related to deleted (Feature #7907: Display Issues in a hierarchy (tree))

#3 - 2014-11-08 12:10 - Toshi MARUYAMA

- File *copy_source.png* added
- File *copy_result.png* added
- Status changed from *New* to *Closed*

source:tags/2.4.7/app/models/project.rb#L852 says "parent issues get copied before their children".
If you want to see issue as tree, you need to sort by id or parent issue.
For more details, see #7907.
