Resolution:			

Description

sometimes it would be nice to have more elaborate filtering capabilities:

- filter the same field multiple times
    - e.g.: you may wand to filter the same text field for values containing word-A **and** word-B. This would be easily possible if Redmine would allow to use the same field for filtering multiple times

More enhanced stuff would be to

- allow boolean logic in filters. I.e.
    - grouping filter lines
    - choosing whether to use and/or logical operation

History

#1 - 2015-04-10 20:21 - Barnaby Court

+1, we have had to start writing scripts outside of redmine to query & assemble data because of the lack of this feature
