Target version:	Affected version: 2.6.0
Resolution:	

Description

There is an in consequence usage of class 'tabular' on /my/account. One fieldset has no 'tabular' class.

```
<div class="splitcontentleft">
  <fieldset class="box tabular">
</div>
<div class="splitcontentright">
  <fieldset class="box">
    <fieldset class="box tabular">
</div>
```

Edit: The same on the page "New issue". Not every fieldset has the class 'tabular'.

- Category changed from My page to UI

I think it is not a problem. Adding "tabular" class to the Email notification box will break the layout.
