Description

We are using the incoming email feature in Redmine, and it's working great.

However, our email signatures are using embedded images, that Redmine detach and import them when creating new features. When communicating by email, the result is not great, each issue is polluted with a long list of attachments.

I wonder if it would be possible to ignore certain attachment when importing emails.

Thanks,
André.

I don't know what embedded images you said are,
I think it is duplicate of [#3413](#).
