Redmine - Patch #1864

Automatically extend /public with javascripts and images from a theme folder

2008-09-05 20:55 - Chris Hart

Status:	Closed		**Start date:**	2008-09-05

Target version:				

Description

We had to develop a custom theme for Redmine and wanted to preserve the default /public folder in its pristine state. Problem was, we had a few theme-specific javascripts that we also wanted to run.

Here is our modified

`/lib/redmine/themes.rb`

.

I like the idea for this patch but I'm a bit tired to test it out. Here's a diff of the file against trunk, could I get another set of eyes to test it out?
