Description <p>I'm using Redmine Wikis in my projects and I appreciate their "history" feature, but there are some pages which are used as a notepads for further discussion about issues (think: RFCs) in which only the most recent version counts. Which brings us to a number of features I can think of:</p> <ul style="list-style-type: none">• ability to mark Wiki page as non-versionable, ie. edits do not create new versions, they operate on the newest present (currently edited),• ability to bulk delete whole Wiki page history (all versions without the most recent of course),• ability to bulk delete whole Wiki history (just like above, but one button for the whole project Wiki). <p>Maybe there is already a solution I'm not aware of? I found #18295, #10852 and #1103 but in my opinion they do not cover that ideas.</p>
