

Redmine - Defect #18779

Error: The single-table inheritance mechanism failed to locate the subclass: 'GroupNonMember'

2015-01-08 07:15 - zeke lee

Status:	Closed	Start date:	
Priority:	Urgent	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:		Affected version:	2.5.0
Resolution:	Invalid		
Description I can't access the project setting page and here is the error log ActionView::Template::Error (The single-table inheritance mechanism failed to locate the subclass: 'GroupNonMember'. This error is raised because the column 'type' is reserved for storing the class in case of inheritance. Please rename this column if you didn't intend it to be used for storing the inheritance class or overwrite Principal.inheritance_column to use another column for that information.):

- Category deleted (Activity view)

- Status changed from New to Needs feedback

It seems you use Redmine [2.6.0](#) database on [2.5.0](#).
Because GroupNonMember is introduced by [r13417](#) [#17976](#).

#2 - 2015-01-08 08:09 - zeke lee

oh, may be it is ; Yesterday I install redmine by bitnami, and I reinstall the redmine in a new linux machine, and i dump the mysql data to it.

how to fix it ? where is the GroupNonMember in database;

sorry, my english is so poor, thanks!

#3 - 2015-01-08 08:14 - Toshi MARUYAMA

- Status changed from Needs feedback to Closed

- Resolution set to Invalid

There is no easy way.
Please google "rake db:migrate:down VERSION=".
