Redmine - Patch #18911

check Setting.protocol when determining gravatar protocol

2015-01-20 14:27 - Maciej Liżewski

Status:	Closed		**Start date:**

Target version:				

Description

proposed change is in line 1235 of app/helpers/application_helper.rb

instead:
options.merge!({:ssl => (request && request.ssl?), :default => Setting.gravatar_default})

change to:
options.merge!({:ssl => ((Setting.protocol == 'https') || (request && request.ssl?)), :default => Setting.gravatar_default})

without that when Redmine is behind reverse proxy that do SSL gravatar links are generated as http (when everywhere else is https as expected after Setting.protocol is changed to 'https')

- Status changed from New to Needs feedback

Similar change was refused at [#9365](#).

#3 - 2015-02-03 16:42 - Maciej Liżewski

OK... That is also acceptable solution.
I did not know about it (using http header) and I did not find it when I was looking for solution - maybe resolution of this issue could be only updating docs to point that out? (somewhere near the description of Settings protocol flag).

BTW - what is the reason for having this "protocol" setting? Does Redmine use it only when generating email messages?
