<b>Description</b>			
<p>I created a custom field in our tickets. This is a custom-user-field. So you can choose all people in a specific role.</p> <p>Now i want to use this custom field in my global ticket list as a filter. This didn't work, i can only choose myself.</p> <p>Maybe this is a because of the role concept from redmine? But we really need a functionality. If i add a user through firebug it works nicely.</p>

Please try this patch: #9445#note-20

It works for me but I would like some more people to test it.
