Resolution: Invalid	

Description

After running db:migrate to bring in an older set of data from redmine 1.4 install, to a new clean redmine install 2.6 version... I had some issues with running the migrate, but I have since fixed that.

However, when I went to test incoming and outgoing emails from redmine, I noticed that the incoming emails are not working... SO I checked and tested (from inside redmine) the test email link... and I get the following error.

An error occurred while sending mail (SMTP-AUTH requested but missing secret phrase)

I am not sure what is going on here.

can anyone help me?

Thank you in advance
