

Redmine - Defect #19457

Redmine crashes when click "View revision" on a big branch of big git repository

Target version:		Affected version:	
Resolution:	Invalid		
Description			
<p>Hi,</p> <p>I am using Redmine 2.6.1.stable with Ruby 2.0.0-p598 and Rails 3.2.21.</p> <p>Whenever a user clicks on "View revision" on a big branch of big git repository, the whole system freezes. By this I mean that not only the user get a timeout page after some minutes, but Redmine stops answering to all other users.</p> <p>The only solution I've found is to restart Redmine.</p> <p>By checking in the FAQ I've seen that by issuing the command:</p> <pre>ruby script/rails runner "Repository.fetch_changesets" -e production</pre> <p>Redmine is supposed to pre-fetch the data, and everything should run smoothly. This is not the case (I've even put this command in cron to execute it every day, just to be sure...).</p> <p>Is this a known behaviour? Is it fixed in Redmine 3.0 (we're going to migrate asap)?</p> <p>Thanks a lot!</p> <p>Cheers,</p> <p>Rob</p>			

History

#1 - 2015-03-23 14:14 - Toshi MARUYAMA

- Category set to SCM
- Status changed from New to Closed
- Priority changed from High to Normal
- Resolution set to Invalid

You can disable "Fetch commits automatically" on setting.

#2 - 2015-03-23 14:18 - Rob HHH6

I cannot see that page because nginx returns an internal error page -- a plugin totally wasted our installation.

I will try that on a new installation!

Thanks a lot!

Rob
