

Redmine - Defect #19791

If user using customized theme with special characters in folder name, the generated stylesheet's URL won't be valid

2015-05-08 12:01 - Jethro Yu

Status:	New	Start date:

Category:	Themes	Estimated time:	0.00 hour
Target version:		Affected version:	2.6.3
Resolution:			

Description

I report this because the special case can cause error in my plugin, redmine_issue_reminder

Overview Description:

If user use folder named "circle space" in redmine for customized theme, the generated page can use:

```
<link href="/themes/circle%20space/stylesheet/application.css" media="all" rel="stylesheet" type="text/css">
```

But not:

```
<link href="/themes/circle space/stylesheet/application.css" media="all" rel="stylesheet" type="text/css">
```

href syntax : is it okay to have space in file name?

[HTML: href syntax : is it okay to have space in file name - Stack Overflow](#)

If user using customized theme with special characters in folder name, the generated stylesheet's URL is not valid

*The href attribute should contain a **valid URL**¹. Since **space characters are not allowed**² in URLs, you have to **encode them**³.*

The Patch

The patch only escapes String but not Symbol, so it may be not a full solution.

History

#1 - 2015-05-08 12:02 - Jethro Yu

- Typo about my plugin, it's http://www.redmine.org/plugins/redmine_mail_reminder
- It Turns out the patch can cause other error. **DO NOT USE THE PATCH!!**

The problem is that Premailer uses URI to parse stylesheet file path, which errors when path has white space.

I have [Monkey-Patched Premailer](#) to use addressable/uri instead of native uri and it's fine now.

"My patch for Premailer/Premailer-rails"

However the issue still exists and currently there are no proper patch for this.
