Description Currently it's possible to have a main project and multiple sub projects. With this setup it's possible to map e.g. a Maven projects structure with it's modules, but it could be very interesting to have more levels. Things like a sub-sub-project etc. Could someone explain if there are any plannings about this or may be give some reasons why it is not planned?			
Related issues: Is duplicate of Redmine - Feature #594: Remove limit on subproject nesting Closed 2008-02-03
