

Redmine - Defect #2018

Plugin configuration frames are overwritten when you install a new plugin

2008-10-10 12:33 - Javier Barroso

Description			
Hi,			
I'm having problem with redmine trunk version.			
I have installed budget_plugin, and its config options from "Information" menu are ok (3 items to configure)			
When I install timesheet_plugin, budget_plugin options are removed and only "List size" option appears.			
If I remove timesheet_plugin, budget_plugin options works again.			
It isn't a problem with timesheet, because I can reproduce it with anothers plugins.			
I can't find any bug relationated with this issue (sorry if it is dup)			
Thanks you

- Status changed from New to Closed

- Target version deleted (0.8)

This is caused by [r1723](#), allowing plugins to override the views. Since the example plugin used settings/_settings.rhtml that template was copied to each plugin I wrote. But after [r1723](#), each plugin can override the previous plugins' settings partial. Since Timesheet is the last one, it's the one used. My latest plugin works around this by using a different partial for the settings.

This isn't a Redmine bug but a change from Redmine that affected (my) plugins.
