**Description**

Hi, I'm developing a follow feature for a customer and i realize that is not possible to fetch activities from many authors.

So i sugest this change:

```
        @scope.each do |event_type|
          constantized_providers(event_type).each do |provider|
            e += provider.find_events(event_type, @user, from, to, @options)
          end
        end
```

to

```
if @options[:author].is_a? Array
  @options[:author].each do |a|
        @scope.each do |event_type|
          constantized_providers(event_type).each do |provider|
            e += provider.find_events(event_type, @user, from, to, @options.merge(author: a))
          end
        end
  end
end
```

Sry for don't submit a patch, I'm not on my pc now and I don't have svn instaled.

*- File fetch_many_authors.patch added*

Hi,
Here the patch, i think nothing that work before was broken and add new possibilities.

fixing patch

#### #3 - 2015-08-31 02:09 - Toshi MARUYAMA

*- Description updated*

#### #4 - 2022-09-15 04:00 - Takenori TAKAKI

*- File 20458.patch added*

I made a patch to allow multiple users to be specified on the /activity.
This patch works with the latest Redmine (trunk@21812).
