

## Redmine - Defect #20811

### long <pre> lines are missing from PDF export of wiki pages

2015-09-22 18:41 - Simon Deziel

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	PDF export	Estimated time:	0.00 hour
Target version:	2.6.8	Affected version:	3.1.1
Resolution:	Fixed		

#### Description

Put the following pre block in a wiki page:

```
mkdir -m 0700 ~root/.ssh
cat << EOF >> ~root/.ssh/authorized_keys
ssh-rsa AAAA... jdoe@example.com
EOF
```

Export it as a PDF and notice it skipped the "AAA... [jdoe@example.com](mailto:jdoe@example.com)" part leaving only this:

```
mkdir -m 0700 ~root/.ssh
cat << EOF >> ~root/.ssh/authorized_keys
ssh-rsa
EOF
```

The ssh-rsa key is a 4096 bit one so it results in a long string of 739 chars total.
