Redmine - Defect #2134

CVS does not handle aliases

2008-11-05 12:03 - Leszek Ciesielski

Status:	New	**Start date:**	2008-11-05
Priority:	Normal	**Due date:**	
Assignee:		**% Done:**	0%
Category:	SCM	**Estimated time:**	0.00 hour
Target version:			
Resolution:		**Affected version:**	

Description

When one adds a CVS alias as the SCM module, Redmine imports it without reporting errors, but the import is broken: it does not recurse into subdirectories (only the first level is scanned). Also, the repository browser shows only the first level directories/files, outputting "The entry or revision was not found in the repository." when trying to descend.

History

#1 - 2012-09-12 13:37 - Maciej Maczynski

Any news about this issue during last 4 years?
I've observed this problem as well with Redmine 1.3.0.
