Description	
<p>There's a few options to make managing translation files easier.</p> <p>The rake tasks can probably be changed to use https://github.com/cherring/i18ndiff (which essentially diffs yaml files, see also https://chrisherring.co/posts/managing-rails-translations) to support keys at any depth.</p> <p>There is also https://github.com/glebm/i18n-tasks that could be used to this purpose, but this would probably be a bigger change.</p>
