Description

Hi there,
Currently, roles and permissions don't allow me to grant issues visibility only to issues where the user is a watcher.
This would be particularly handy in scenarios where someone else creates the issue for the user, wants to allow the user to track progress, and not expose all other project issues to the user.
The closest thing to accomplishing this today would be for the user to create the issue, and the role permission to be set to only see issues created by the user.

My clients each have their own projects and there are issues for the team, and issues for the client. I'd like to keep them separate.

Feedback welcome, and I hope this gets taken into consideration!
