Description

It would be highly useful to those integrating the Redmine API to have a descriptor of it available for the generation of code.

e.g. - Mylyn connector for Eclipse is pretty much an amateur effort, and would benefit greatly from having an API descriptor available, even if it was just so it could be diffed between versions to determine what to work on.

Would it be a relatively easy thing to provide Swagger / OpenAPI or some other API description?

History

#1 - 2020-01-27 17:19 - Mikhail Mikhaylov

Is there any chance that this could be implemented sometime in the future?

How can it be solved?

By adding specs with [rswag](#)?

I found a redmine's swagger on [github](#) but it's not full and probably outdated

Can someone provide additional info?
