

## Redmine - Defect #22281

### http://redmine.org results in a 403 Forbidden

2016-03-17 17:06 - Holger Just

<b>Status:</b>	Closed	<b>Start date:</b>	
<b>Priority:</b>	Normal	<b>Due date:</b>	
<b>Assignee:</b>	Jean-Philippe Lang	<b>% Done:</b>	0%
<b>Category:</b>	Website (redmine.org)	<b>Estimated time:</b>	0.00 hour
<b>Target version:</b>		<b>Affected version:</b>	
<b>Resolution:</b>	Fixed		

#### Description

It seems that during a change of the webserver configuration for redmine.org, the non-www virtual host has gone missing. It would be great of you could re-introduce this vhost or at least add a redirect to [www.redmine.org](http://www.redmine.org). Thanks!

http://redmine.org	403 Forbidden

when searching for the term "redmine" using the duckduckgo search engine, <http://redmine.org> is listed as the first result as the "official site" (which then goes to the 403 forbidden site). So this is quite a bad experience for some people! Arguably ddg should fix this, but presumably they scraped it from somewhere else, so I guess the url is out there.

Well since redmine.org is served by apache here is Apache's .htaccess file that I use which is SEO friendly and works in every case, redirecting users from non-www to www, and forcing SSL:

```
<IfModule mod_rewrite.c>
  RewriteEngine On
  RewriteCond %{HTTP_HOST} !^www\.
  RewriteRule ^(.*)$ https://www.%{HTTP_HOST}/$1 [R=301,L]
</IfModule>
```

You just need to enable mod-rewrite.

#### #11 - 2017-02-01 03:23 - Toshi MARUYAMA

+1 forcing SSL.

I don't want to log-in to redmine.org on free Wi-Fi area.

#### #12 - 2017-05-22 14:41 - Fernando Hartmann

I just realized that <http://redmine.org> is now returning HTTP 302

```
~$ curl -v http://redmine.org
* Rebuilt URL to: http://redmine.org/
* Trying 46.4.36.71...
* Connected to redmine.org (46.4.36.71) port 80 (#0)
> GET / HTTP/1.1
```

```

> Host: redmine.org
> User-Agent: curl/7.47.0
> Accept: */*
>
< HTTP/1.1 302 Found
< Date: Mon, 22 May 2017 12:39:15 GMT
< Server: Apache
< Location: http://www.redmine.org/
< Vary: Accept-Encoding
< Content-Length: 207
< Content-Type: text/html; charset=iso-8859-1
<
<!DOCTYPE HTML PUBLIC "-//IETF//DTD HTML 2.0//EN">
<html><head>
<title>302 Found</title>
</head><body>
<h1>Found</h1>
<p>The document has moved <a href="http://www.redmine.org/">here</a>.</p>
</body></html>
* Connection #0 to host redmine.org left intact

```

```

Unfortunately this wasn't done, we are redirecting to HTTP, :-/

**#13 - 2020-01-10 03:37 - Go MAEDA**

- Status changed from New to Closed
- Resolution set to Fixed

Now "GET <http://redmine.org>" returns "302 Found" instead of "403 Forbidden". In addition, HTTP is redirected to HTTPS.

http://redmine.org	302 Found (Location: https://redmine.org/)
http://www.redmine.org	302 Found (Location: https://www.redmine.org/)
https://redmine.org	200 OK
https://www.redmine.org	200 OK
