

## Redmine - Feature #22310

### Custom field of type Link: add new variable to pass the user

2016-03-23 14:48 - Kevin Palm

<b>Status:</b> New	<b>Start date:</b>

<b>Category:</b> Custom fields	<b>Estimated time:</b> 0.00 hour
<b>Target version:</b>	
<b>Resolution:</b>	

**Description**

Currently only these variables are supported/documented:

- value => the custom field value
- id => id of the customized object
- project\_id => id of the project of the customized object if defined
- project\_identifier => identifier of the project of the customized object if defined
- m1, m2... => capture groups matches of the custom field regexp if defined

It would be nice to have another variable to identify the currently logged user.  
Either by passing the:

- user id
- the login name
- **the user's API access key**

I would love to receive user's API access key -> The called webservice could use that key to access Redmine!
