| Status: | Closed | Start date: | |
| Priority: | Normal | Due date: | |
| Assignee: | | % Done: | 0% |
| Category: | | Estimated time: | 0.00 hour |
| Target version: | 3.1.5 | Affected version: | 3.1.0 |
| Resolution: | Fixed | | |
| Description | | | |
| Error message encountered when running bundle update from my Redmine installation directory: | | | |
| <pre>Gem::InstallError: mime-types-data requires Ruby version >= 2.0. An error occurred while installing mime-types-data (3.2016.0221), and Bundler cannot continue. Make sure that `gem install mime-types-data -v '3.2016.0221'` succeeds before bundling.</pre> | | | |
| Redmine installation details (taken once I restored the installation directory from backup): | | | |
| <pre>sh: 1: darcs: not found sh: 1: cvs: not found sh: 1: bzip2: not found Environment: Redmine version 3.2.0.stable.14966 Ruby version 1.9.3-p0 (2011-10-30) [i686-linux] Rails version 4.2.5.1 Environment production Database adapter MySQL2 SCM: Subversion 1.6.17 Mercurial 2.0.2 Git 1.7.9.5 Filesystem Redmine plugins: no plugin installed</pre> | | | |
| Does Redmine still support Ruby 1.9.3? I looked at the RedmineInstall page and it is still listed there. From what I can recall you guys don't have a habit of switching requirements in the middle of maintaining a branch, so I figured this was something that folks just haven't reported yet. | | | |
| P.S. | | | |
| I use a Subversion tag for the installation. I then just switch tags when it is time to upgrade to a new version and then run the applicable upgrade steps. | | | |

Thanks! I modified Gemfile to include that change and it allowed me to complete the 3.2.0 to 3.2.1 upgrade without issue.
