

Redmine - Feature #22383

Support of default Active Record (I18n) transliteration paths

2016-04-04 14:16 - Ivan Zabrovskiy

Status: Closed	Start date:
Priority: Normal	Due date:
Assignee: Jean-Philippe Lang	% Done: 0%
Category: I18n	Estimated time: 0.00 hour
Target version: 3.3.0	
Resolution: Fixed	
Description	
<p>For now, in <i>10-patches.rb</i> we have a redefinition of method <i>human_attribute_name</i>. But default (plain without hierarchy) Redmine style of transliterations are not convinient for some reasons, especially in big projects. So, my proposal is follows: enable ActiveRecord behaviour for finding transliterations path and add in list of search paths custom one from Redmine. Here is a worked snippet of code:</p> <pre>def self.human_attribute_name(attr, options = {}) prepared_attr = attr.to_s.sub(/_id\$/, "").sub(/^\.+\.\/, "") redmine_default = [:field_#{name.underscore.gsub('/', '_')}_#{prepared_attr}", :field_#{prepared_attr}"] if options[:default].present? options[:default] = [options[:default]] unless options[:default].is_a? Array options[:default].unshift redmine_default else options[:default] = redmine_default end super end</pre> <p>In this case we obtain follows chain of search paths:</p> <ol style="list-style-type: none">1. default AR paths (for example: activerecord.attributes.model_name.field_name)2. default Redmine paths (for example: field_content)3. user specified paths (specified in <i>:default</i> key from <i>options</i> attribute)4. attribute.humanize (from default <i>human_attribute_name</i> from ActiveRecord)
