Description

According to **Rest_Users** there is no way to change user state to blocked.

This is very useful feature for script that automate person discharge.

I have script that do suitable magic with LDAP, but for redmine I can only delete user, not block, so every time I have to block user account in redmine by hands.

History

You can set the status of the user using a **PUT request**. There, you can set the status as follows (here using json):

```
{
  "user": {
    "status": 3
  }
}
```

The status values are as follows:

- STATUS_ACTIVE = 1 (User can login and use their account)
- STATUS_REGISTERED = 2 (User has registered but not yet confirmed their email address or was not yet activated by an administrator. User can not login)
- STATUS_LOCKED = 3 (User was once active and is now locked, User can not login)
