| Description | |
| <p>This patch allows you to paginate through the assigned and reported issues in my/page which makes the user feel comfortable when he has to navigate through numerous issues.</p> <p>Right now, the patch is more specific to paginating assigned and reported issues, but can be generalised to be used wherever needed(I will be posting that in my next patch). I have also commented my code on how to customize the pagination.</p> <p>This is my first patch (ofcourse,my first contribution to OSS).So,any suggestions/comments/criticisms are truely welcomed.</p> <p>thanks and regards, Venkat venkat.bagam@rknowsys.com</p> | |

For me the archive is corrupt. Can you put another patch only by text/plain.

Thank. After, I read you patch and comment it.
