Description

Greetings,
after a long process to setup the Redmine server on Centos 7 I hit a wall.

Whenever I visit the homepage https://redmine.someurl.com it returns a Page not found.
All subpages work properly (I "guessed" https://redmine.someurl.com/projects), I can edit my profile information and create new projects.

I can not find a suitable category to fit this issue into.

Hi, then what should be? According to the included .htaccess file, there should be a index.html?
Because if default configuration with fresh installation does not work, there is something wrong.
