Target version:			
Resolution:			
Description Quite often version itself represent a specific scope of work under the large project or a full project itself and hence it should be reflected in the version page. Specifically the version page should have following information. <ol style="list-style-type: none">1. % completion and color coding of issue listing based on status.2. Tree structure of issue listing based on sub-task3. Allow to order the issues (not necessarily sort by tracker or issue number) which represent the order of work or any other criteria.4. List of users involved in the version (based on assigned users of issues under the version).5. Similarly show followed/precedes relation of issues through arrows that will map flow of work more elegantly.
