# Redmine - Feature #23307 Get which auth source id of a user

2016-07-12 15:37 - Roger Mårtensson

Status: New Start date: **Priority:** Due date: Normal

Assignee:

**REST API** 

Resolution:

Target version: Candidate for next major release

## Description

Category:

it would've been nice to be able to get which auth source id a given user has through the REST API. A nice complement to when creating user where it is possible to set the auth source id.

I agree. This feature is also useful for admin scripts which needs to distinguish between "external" and LDAP users.

I attached a patch for this feature. auth\_source\_id only gets visible for admin users in it, as I do not see the need for standard users.

## #6 - 2019-09-07 02:47 - Go MAEDA

I think the response should include not only id but also name. Maybe the response does not include "auth\_source" if the user uses internal authentication.

```
"user": {
 "id": 1,
 "login": "admin",
```

2022-07-07 1/2

```
"firstname": "Redmine",

"lastname": "Admin",

"created_on": "2006-07-19T17:12:21Z",

"last_login_on": "2019-09-06T06:37:53Z",

"auth_source": {

    "id": 1,

    "name": "LDAP test server"

}

}
```

#### #7 - 2019-09-08 05:03 - Go MAEDA

- File 0001-Add-auth\_source-to-the-users-API-response.patch added

Here is a patch to add auth\_source to the response of GET /users/:id.(xml|json). auth\_source is included only when the users auth\_source is not nil and the current user is an administrator.

```
"auth_source": {
    "id": 1,
    "name": "LDAP test server"
},
```
