Description

Currently when you wish to include only parts of an issue description as a quote in a comment, you have two options:

- a) use the quote button for the issue description and delete all unnecessary description from the quote
- b) manually highlight parts of the issue description, add a new comment and copy+paste the highlighted parts

Both options have their obvious disadvantages:

- a) especially with lengthy issue descriptions it can be tedious work to manually delete text in the small comment edit text field
- b) all formatting is lost, table formats and similar cannot be copied

A great improvement would be the possibility to highlight a paragraph/section/table, etc. in an issue description, click quote, and have only this content quoted in the comment edit field, preversing all formatting (colors, hyperlinks, tables, etc.)
