Description			
Hi,			
i wanna use the Rest_api for our automated deployment. For that reason, I need several functions:			
<ul style="list-style-type: none">• query all issues that are open and in a milestone• change a milestone name• create a new milestone			
the process is as follows:			
<ul style="list-style-type: none">• we have a milestone "to takeover 2016/KW30"• after our automated git script (that mearges our staging branch to the production branch), we want to:			
<ol style="list-style-type: none">1. change the name of the milestone to "in production since 2016/KW30"2. update all issues with the comment, that all is in production and should be verified there			
<ul style="list-style-type: none">• after that, we need a new milestone "to takeover 2016/KW31" for the next week
