This is not a feature request but rather an error regarding the inline support for attachment links.

##### #3 - 2016-08-19 13:52 - Toshi MARUYAMA

- Subject changed from Cannot display wiki-attached image inline to wiki-attached image inline in issue

- Category changed from Attachments to Text formatting

- Priority changed from High to Normal

How do you deal if user does not have permission to see wiki?

Wherever the link leads to, the attachment should only be accessible with the appropriate permission. This would especially be true for links to other projects.

+1 for this.

I need syntax like this:

"![[MyWikiPage]]:myimage.png!"

"#IssueID:myimage.png!"

"project:[[MyWikiPage]]:myimage.png!"

"project:#IssueID:myimage.png!"

For us, some page has regularly updated image data (graphs) which we need to link to other pages. As the image ID changes every time new image is updated - links are broken for new uploaded image.

There is a workaround - you can store this files at some ftp and http service and link to them, BUT built in solution is needed.

I would also suggest Redmine team to implement a solution, that allows users to PAY for features they need in stock system.

I understand, that Redmine is a free product, but user payments will show what is REALLY required. Team will be motivated to implement such feature faster. Even hire extra devs to implement, using given resources, if needed.
