Description

after installing redmine 3.3.0 I add the scrum-plugin according the wiki [how to install](#).
First all seems to be OK. Here the config:
redmine.PNG

Then we noticed an error on Calendars. This seems to be the same as reported by [Meindert Oldenburger](#) . Meindert's "workaround"-hint is OK.

But we got another error:

```

```

- without the scrum plugin all was fine

After some reseaches I realized that the upgrade of the database was not processed.
Why?

- I tried once more:

```
sudo bundle exec rake redmine:plugins:migrate RAILS_ENV=production
```

- same result, error on calendar
- and the db table sprints has column start_date, instead of sprint_start_date

Then I try:

```
sudo bundle exec rake --trace redmine:plugins:migrate NAME=scrum RAILS_ENV=production
```

Result:

- no error on calendar
- the column sprints.sprint_start_date is there

So it is a doku-error.

- **NAME=plugin-name** is missing
- I would suggest to prefix the cmd with **sudo**, too

This did not run.

https://redmine.ociotec.com/projects/redmine-plugin-scrum/repository/entry/tags/scrum%20v0.14.0/db/migrate/20150123075700_change_sprints_dates.rb

- **NAME=plugin-name** is missing

NAME does not need if VERSION is not defined.

Sorry, I am wrong.

NAME is optional.

<source:tags/3.3.0/lib/redmine/plugin.rb#L463>

But, this is problem of your environment or plugin.

Please contact plugin author.
