Description

I often set up relationships between tasks using Blocks and Precedes. However these types are unidirectional so I have to set them from the blocking (or preceding) issue. About 50% of the time the issue I am looking at is at the other end of that relationship - could we not have additional choices "Blocked By" and "Preceded By" so I can set this up without having to go to the other issue first please?

Also like to see this for the "duplicates"-relationship...

should be just included for all relationships it makes sense for.
