Description

Since a few days we have extremly long duration on POST requests. I have a production.log at :INFO - level and cannot find a reason why. GET requests are fast (< 1 sec).

I enclose the trace to an update to a ticket. Duration 17 sec. But we have even duration up to 30 sec recorded. Since a year nothing changed. I did alread Unload - reload, restart the webserver and the "normal" stuff.
