

Redmine - Defect #24869

Circular inclusion detected when including a wiki page with the same name

Target version:	3.2.6	Affected version:	3.3.2
Resolution:	Fixed		

Description

A Circular inclusion is incorrectly identified when including a page internal to a project with the same name from another project. This affects version prior to and including 3.3.2. To recreate:

1. Create test-project-1
2. Create wiki page named "IncludedPage" with any contents
3. Create test-project-2
4. Create wiki page named "IncludedPage"; contents include to test-project-1: `{{include(test-project-1:IncludedPage)}}`
5. Create wiki page named "TestPage"; contents include to local IncludedPage: `{{include(IncludedPage)}}`

In test-project-2/IncludedPage there is no error, however in test-project-2/TestPage the circular inclusion is detected.

Suggest modifying `lib/redmine/wiki_formatting/macros.rb` to use `page.id` instead of `page.title`.
