

Redmine - Feature #2580

Remote git repositories

2009-01-25 16:36 - Kevin Menard

Resolution:	Duplicate		
Description <p>I'm sure this one has been asked before, but I couldn't find anything with search. So, apologies if a duplicate.</p> <p>I think it would be great if Redmine could handle remote git repositories, at least over HTTP and git protocols. Handling SSH would also be nice, but admittedly harder.</p> <p>Right now, Redmine puts a lot on the lap of the admin to view remote repositories. A local bare clone has to be made and a cronjob created to pull in changes. I'd posit that this is all work that Redmine could do. I suppose the hardest part would be the scheduler. For smaller projects, on demand pulls may be sufficient. For larger projects, Redmine could ship with a Rails daemon that handles the pulling. Or, at the very least, a crontab line that the admin can run that will call a Rails runner that does all the git repo updating.</p> <p>I realize all of this is not very difficult to do outside Redmine. I'm just trying to ease the barrier to entry with the product.</p>

Apparently this was rejected because "it couldn't be done". Well it is doable, as been done here:
https://www.redmine.org/plugins/redmine_git_remote

This really should be incorporated into the core. Git is extremely popular, and most often people have their git repos on a separate host, such as GitHub.
