Description When I use Import menu, I found the Import menu only can create issues, couldn't update exist #ID issues. Sometime when I out of network, I have to update data via csv files. When I back to network, it will a mass of issues need me update, That is very inconvenient. So I thought, if add #ID into Import Feild mapping, the Import will support update exist #ID issues. The expect result view may like attached import.png.
