Redmine - Feature #26017

Get also labels for key/value custom fields by API

Description

When I call /issues/123.json
I got values of custom fields, but for key/value i got only name and value (integer) but not string (label) which is normally visible on frontend.
To access tring value, I have to use another API call.
IMHO it would be much more simple to return all id, name, value and **label**
