

## Redmine - Defect #27043

### SVN repos with spaces allow for browsing but not file viewing

2017-09-20 04:11 - Oliver Robson

<b>Status:</b> New	<b>Start date:</b>
<b>Priority:</b> Normal	<b>Due date:</b>

<b>Category:</b> SCM	<b>Estimated time:</b> 0.00 hour
<b>Target version:</b>	<b>Affected version:</b> 3.2.5
<b>Resolution:</b>	
<b>Description</b>	
<p>Our Subversion repository naming structure incorporates spaces in it (<a href="http://some.url/svn/repo with spaces/">http://some.url/svn/repo with spaces/</a>), and it seems this is not working perfectly in Redmine. I can see the files within the repository, however if I try and view a file or the diff of a file, I get a "404 The entry or revision was not found in the repository.". If I try the same thing with a different repository with no spaces in the name, it works as I believe it should (can view / diff files). Interestingly, if I go to a specific revision and 'View differences' it will do a diff of all of the changes in that revision perfectly fine, it's only upon diffing / viewing a single file that it fails.</p> <p>I have tried replacing the spaces with %20, however this stops me being able to browse the repo at all. I have tried putting the repo string in quotes, however this is not accepted by Redmine as quotes are considered an invalid character in that box.</p> <p>Having a space in a file name doesn't cause any issues with regards to viewing / diffing, it's just with the repo itself.</p> <p>The resolution in #7505 shows the repo browsing to be working as intended (like it is for me), however upon attempting to view those files in Redmine is where the issue appears.</p>
