Category:		Estimated time:	0.00 hour
Target version:			
Resolution:		Affected version:	3.3.2

Description

Dear Redmine,

We have an issue with our current version of Redmine. We have about 50 different projects in our location installation, including some plugins:

```
    Environment:
      Redmine version           3.3.2.stable
      Ruby version              2.1.2-p95 (2014-05-08) [x86_64-linux]
      Rails version           4.2.7.1
      Environment             production
      Database adapter          Mysql2
    SCM:
      Subversion              1.8.11
      Mercurial               1.4
      Git             2.3.1
      Filesystem
    Redmine plugins:
      plantuml_macro            0.0.1
      redmine_wiki_extensions        0.7.0
      redmine_wiki_lists           0.0.8
      scrum                   0.16.2
```

Since a day ago, we are having problems with our (sub)projects being re-arranged incorrectly in the breadcrumbs (top left corner) and the drop-down list for project selection in the top-right corner. Please see attached file attachment:redmine-bug-breadcrumbs.png).

Even though in the settings page of "Project A" the information is correct (Project A is a subject of Projects, which is a subproject of Development), in the breadcrumbs and drop-down list it shows that Project A is subproject of Development.

It also seems that when we want to move one (sub)project to a different level, many other projects get "moved" unwanted. Is there some cache that needs to be cleared, or do we have some corrupted data in the database?

Thanks!

History

#1 - 2017-10-31 16:57 - Toshi MARUYAMA

- Status changed from New to Needs feedback

Please describe more details.

What do you expect and result?

#2 - 2017-11-01 18:15 - Robin Corba

Let's say I have to following project structure in my Redmine installation:

Development > Projects > Project A

However in the breadcrumbs in the top left corner, and the drop-down list it is like this:

Development > Project A

So, I want to move 'Project A' to become the subproject of 'Projects' however when I change the parent project to 'Projects' Redmine will make the parent project 'Development' again, which is on level too high.

In some cases, we have the following structure:

Development > Projects > Project B
Development > Project A
Finance

If I move Project A to become a child of Projects, for some reason Project B is moved to a different project (for example Finance):

Development > Projects > Project A
Finance > Project B

I think there is a bug in the project movement.

- Category deleted (UI)

Did you try bundle exec rails runner "Project.rebuild_tree!"?
