

Redmine - Defect #27560

RJS is messing up Nginx proxy for static files

Description

I have a simple Redmine+Nginx setup and I upgraded to the latest Redmine version. I see that the following is not working:

- issues: switch version, switch tracker
- custom field: switch format
- probably a lot more

The issue is that I have the following Nginx configuration:

```
location ~* ^.+\. (?::css|js|jpe?g|gif|htc|ico|png|html)$
```

That is fairly common to serve static files directly and make use of Nginx speed. But it breaks RJS apparently.

Because you have this requests:

```
<script>
//

$('#custom_field_field_format').change(function() {
  $.ajax({
    url: '/custom_fields/new.js',
    type: 'get',
    data: $('#custom_field_form').serialize(),
    complete: toggleDisabledInit
  });
});

RJS shouldn't be used anyway: [#15560](#)

Of course that's just a suggestion :) Renaming new.js to something like new.rjs would also be nice.
