## Revision 4558 - 2010-12-22 22:37 - Jean-Philippe Lang

Support for Javascript in Themes (#2803).

If javascripts/theme.js is found in the theme directory, it will be automatically loaded on each page.

#### History

#### #1 - 2010-12-19 14:04 - Ruben Kruiswijk

What is the status about this issue? I think it would be very valuable to add javascript support on themes. Are there problems in integrating the patch in issue <u>#1864</u> ?

### #2 - 2010-12-20 23:54 - Jean-Philippe Lang

Unlike CSS, I don't think it makes sense to let themes override the core application.js (any change to that file would break the compatibility with the theme). Instead, we could automatically load a given script (/javascripts/theme.js for example) if it is found in the theme directory.

# #3 - 2010-12-21 02:09 - Leonard Brünings

That solution would be fine.

## #4 - 2010-12-22 09:44 - Ruben Kruiswijk

That solution would be fine for me too. Could that feature be implemented in Redmine 1.0.5?

# #5 - 2010-12-22 21:21 - Jean-Philippe Lang

- Category set to Themes
- Target version set to 1.1.0

No features in stable branches but I think I can add this improvement to 1.1.

# #6 - 2010-12-22 22:43 - Jean-Philippe Lang

- Status changed from New to Closed
- Resolution set to Fixed

#### Feature added in r4558.

Add javascripts/theme.js to your theme directory and it will loaded automatically.
