Target version:				
Resolution:	Duplicate		**Affected version:**	3.4.4

Description
On page https://github.com/redmine/redmine/blob/master/doc/INSTALL we can read what Redmine tested with MySQL 5.7 and should work fine with this version. But on page http://www.redmine.org/projects/redmine/wiki/RedmineInstall we can read what Redmine is not compatible with MySQL 5.7 Does Redmine compatible with MySQL 5.7 or not ? On which page written truth? If Redmine is not compatible with MySQL 5.7 - how it is possible to use Redmine with Ubuntu 16.04 ? Ubuntu 16.04 was packaged with MySQL 5.7 and have no way to use older MySQL version 5.0 - 5.5 Can you please make Redmine fully compatible with MySQL 5.7 ?

Redmine works well with MySQL 5.7. I'm running multiple instances on Ubuntu 16.04 and never ran into a problem.

In page http://www.redmine.org/projects/redmine/wiki/RedmineInstall

you can read what Supported database back-ends are only MySQL 5.0 - 5.5
and what MySQL 5.6 or higher and MariaDB have known issues (#19344, #19395, #17460).

Until these issues are not resolved - MySQL 5.7 is not compatible with Redmine 3.4
and MySQL 5.7 is not supported.

#3 - 2019-01-08 06:37 - Marius BĂLTEANU

- Is duplicate of Feature #17460: MySQL 5.7 support added

#4 - 2019-01-08 06:37 - Marius BĂLTEANU

- Status changed from New to Closed

- Resolution set to Duplicate

I'm closing this in favour of #17460.
