Target version:			
Resolution:			
Description			
<p>I think that it will be a good point to have separate permissions for "creating" and for "deleting" Versions instead of having one "Manage" right.</p> <p>To my point of view Creating a Version is part of the common process of releasing something and could be done by some targeted developers, Deleting a version is to my mind something that belongs only to the manager of the project.</p>
