A Tagging system would be a great feature for redmine.

Two tagging versions could be possible:

The user gets a textfield and enters tags (separated by space - linked words are encapsulated in quotes - eg. "tag this string" term2 term3 "term nr 4")

Central tagging handling: The system admin generates a list of tags (similar to the 'user defined fields' - taggroups can be assigned to different pageareas)

The user then gets the opportunity to check a variable number of tags (within an issue or a project or [most imortant] while booking time)

While beeing a good typo3 and JS programmer, my Ruby on Rails skills are pathetic. Therefore I can just offer my help for testing and conceptualization!

#2 - 2009-03-30 20:28 - Jens Goldhammer

Maybe you can look at the tagging plugin for trac:

<http://trac-hacks.org/wiki/TagsPlugin>

It implements a tag cloud of all tags which are entered at the wiki page and tickets...

#3 - 2009-03-31 10:41 - karthikeyan rangaswamy

I Tried Installing that.But it asks me for Proxy Authentication.Are u using that Tags Plugin of TRAC.if so can u tell me how u installed that one.How the Trac plugin will communicate with redmine

#4 - 2009-03-31 10:59 - Jens Goldhammer

Sorry for misunderstanding me.

This is a plugin for TRAC, not for Redmine. It can only give you ideas how to implement it.

#5 - 2009-05-22 13:44 - Mathew C

This is related to #480 - "Wiki: Support categories tagging and autolisting" and the more general issue #1448 - "Add tags to issues".

Personally tagging would be good for the wiki as pages don't always fit into a neat category so being able to add tags is one step better than just relying on the good search facilities in Redmine.

#6 - 2010-10-15 15:11 - Steve McCauley

I would love to see tagging support added to redmine by default as well. This plugin is available and looks like a good start, although I was unable to install it in our production environment,

http://github.com/friflaj/redmine_tagging#readme

Unfortunately that plugin only seems to tag on issues (not documents, files, wiki pages, etc). It seems that the author of this plugin is actively working on it, perhaps he could be convinced to add tagging to the redmine codebase proper.

#7 - 2010-11-04 10:27 - Siegfried Vogel

+1

I'd love to see tagging in Redmine's near future, too!

May I add a requirement here: In my Use Case *some* tags should be protected from being deleted by users with insufficient rights. It could be solved with something like:

A tag added to an issue by an administrator may not be deleted by a non-admin.

#8 - 2010-11-19 21:44 - James Rowe

Not sure how I missed this when I created my issue, but +1 for sure.

#9 - 2012-02-22 15:27 - Aleksey Timohin

To have built-in tagging would be awesome!

p.s. About GUI: I like how Tags look like in [Redmine contacts plugin](#)

#10 - 2012-06-28 17:18 - rm user

Another feature which MUST BE INCLUDED!!!

I tried installing the plugin from http://github.com/friflaj/redmine_tagging#readme

but unfortunately it breaks other plugins compatability such as show attachments as thumbnails

#11 - 2013-03-17 22:20 - Ivan Cenov

https://github.com/ixti/redmine_tags

works in Redmine 2.x.x

#12 - 2013-12-16 17:06 - Paul Dann

I really think tagging needs to be integrated into Redmine core. In a world where many projects are turned around in a short amount of time, in an increasingly unstructured way, tagging is starting to make more sense than carefully pre-arranged categories and fields. Look at Github, for instance. I think this needs to be merged, and should receive some more focus to integrate it throughout Redmine.

#13 - 2014-02-07 15:36 - Alain V.

+1000 quite important to have this feature!

Multiple and Transverse possibility!

please

#15 - 2014-02-07 23:27 - rm user

don't think it would be implemented anytime soon .. check the date when it was created ... :(

#16 - 2014-02-08 07:39 - Ivan Cenov

Also, https://github.com/ixti/redmine_tags stagnates -- 19 open issues

#17 - 2014-05-12 14:24 - Peter L.

Yeah.. Anybody knows a working implementation for the latest redmine version?

#18 - 2014-07-17 22:43 - Adam Myers

+1

This feature is badly needed. Redmine is spectacular - the devs did a bang-up job - but this is a standard issue-tracker feature and its absence is a gaping hole.

#19 - 2014-11-01 14:21 - Slawomir CALUCH

+1 this is needed on larger projects where issue should be added to multiple categories.

#20 - 2014-11-24 04:34 - Matthew Seng

+1

Really hope to have this feature to organize our issues.

#21 - 2015-02-10 10:11 - Alexandr Ivanov

+1 Really need it as native feature

#22 - 2015-11-03 11:00 - Kevin Palm

Completely Agree that a tags system is desperately needed in Redmine.

Redmine is indeed a powerful and happy ting to use, tags would make it simply awesome.

I guess, stackoverflow style tagging, issue tracking, and wiki composing would be incredible.

It could make the very process and experience of Redmine usage - Agile, simple and self-intuitive.

I don't know if I am asking too much, but I am sure the superb hacks powering Redmine's evolution, can surely do it.

#26 - 2016-04-20 11:25 - Marius BALTEANU

- Priority changed from High to Normal

I've proposed 2 patches in #1448, please see comment #1448#note-115
